EDUCATION

University of Central Florida

Orlando, FL

B.S. in Computer Science

May 2028

Relevant Coursework: Computer Science 2, Security in Computing, Object Oriented Programming

Organizations: Knight Hacks (Outreach Member), EXCEL, ACM, Robotics Club (RCCF), GPK

TECHNICAL SKILLS

Languages: Java, Python, SQL, TypeScript, JavaScript, Lua, C, HTML/CSS

Frameworks & Libraries: Spring Boot, Flask, Next.js, React, React Native, Node.js, Prisma, Tailwind CSS

Cloud & DevOps: AWS (S3, CloudFront), Docker, Agile, CI/CD, PostgreSQL, Vercel, Git

RELEVANT EXPERIENCE

Software Engineering Intern

May 2026 – August 2026

PETE Learning

Orlando, FL

- Incoming, Working on automations Using N8N automated with coding, programatically makign the automations, building an intelligence corpus for the company, alot of internal tools.

Software Engineer Intern

Jan. 2026 – May 2026

Graphics Programming Knights

Orlando, FL

- Building a club website with **Next.js** and **TypeScript** to showcase member projects, gallery posts, and club events for an active student organization.
- Developing a responsive, mobile-first interface using **Tailwind CSS** and **Shadcn UI** components, ensuring consistent design and accessibility across all screen sizes.
- Designing the site architecture and data models to integrate with a **PostgreSQL** backend, enabling dynamic rendering of member-submitted projects and event information.

PROJECTS

Recall | *Python, Gemini 2.5 Flash, YOLOv8, ChromaDB, ElevenLabs, ESP32, Next.js*

Mar. 2026

- Won **2nd Place** out of 85+ projects at **HackUSF 2026** by building a **wearable AI memory assistant** that passively captures a user's environment and enables instant natural language queries
- Designed a computer vision pipeline using **OpenCV** and **YOLOv8 Nano** to filter video frames, sending scenes to **Gemini 2.5** Flash Vision to generate detailed spatial descriptions of the user's environment.
- Indexed scene descriptions in **SQLite** and **ChromaDB** vector embeddings for semantic search, surfaced through a **Flask** API with a live memory timeline and **ElevenLabs TTS** conversational chat.

TideSense | *React Native, TypeScript, Python, TensorFlow Lite*

Nov. 2025

- Engineered a **full-stack AI mobile application** that utilizes computer vision to identify and classify dangerous rip tide currents via a smartphone camera.
- Implemented **TensorFlow Lite** for on-device object detection, developing a custom post-processing algorithm to filter model noise and improve detection stability.
- Integrated the **Gemini API** to provide contextual safety advice and utilized the **ElevenLabs API** to generate real-time audio risk assessments for users.

Next Step | *Next.js, React, TypeScript, Python, Flask*

Sep. 2025

- **3rd Place Winner** (State Farm Challenge) out of 50+ projects at **ShellHacks 2025** for an AI-driven insurance education platform.
- Developed interactive, voice-based simulations using **Vapi AI** to teach insurance fundamentals through real-time, decision-based scenarios.
- Built a scoring system to evaluate user safety and knowledge retention, providing immediate feedback based on simulated insurance claims and coverage choices.
